PROFESSIONAL SUMMARY

Computer Science graduate with hands-on internship and project experience in Linux, AWS, Docker, Terraform, and CI/CD automation using GitHub Actions. Built cloud infrastructure and automated deployment pipelines. Seeking a Junior DevOps Engineer role.

TECHNICAL SKILLS

Cloud & AWS: AWS EC2, S3, VPC, Security Groups, Internet Gateway, Route Tables

Infrastructure as Code: Terraform (modules, remote state, state locking, drift detection, import, lifecycle rules)

Containers: Docker, Docker Compose, Docker networking

CI/CD & Quality: GitHub Actions, Docker Hub, Pytest, SonarCloud

Scripting & Systems: Bash, Python, Linux, Ubuntu

Version Control: Git, GitHub

Web & Networking: Nginx, HTTP/HTTPS, SSH, Cloudflare DNS

Practices: Automation, containerization, troubleshooting

INTERNSHIP

OpsMonsters Software Consulting Pvt Ltd — Associate System Engineer Intern | Feb 2026 – Present

- Configured Cloudflare DNS routing and Nginx reverse proxy for the production server.
- Containerized the deployment environment using Docker with persistent volume storage.
- Deployed the application from Git to the production server and validated the end-to-end workflow.
- Monitored Linux services using logs and alerts, and documented incident causes and fixes.

PROJECTS

Terraform AWS Production Lab

github.com/abhishekpr-devops/terraform-aws-production-lab

Tech: Terraform, AWS, VPC, EC2, S3, Security Groups, Remote State, State Locking, Modules

- Provisioned VPC, public subnet, internet gateway, route table, security group, and EC2 web server using modular Terraform configurations.
- Implemented remote Terraform state in S3 with state locking to prevent concurrent state corruption.
- Practiced drift detection by modifying an EC2 tag, identifying the change with `terraform plan`, and reconciling with `terraform apply`.
- Imported an existing S3 bucket using `terraform import` and applied `prevent_destroy` lifecycle rules.

Calculator CI/CD with SonarCloud

github.com/abhishekpr-devops/calculator-cicd-sonarqube

Tech: Python, Flask, Docker, Docker Hub, GitHub Actions, SonarCloud, AWS EC2, SSH

- Built a Python Flask calculator API and containerized it with a custom `Dockerfile`.
- Automated testing, code quality scanning, image build, and deployment with a GitHub Actions workflow.
- Deployed the containerized application to an AWS EC2 Ubuntu instance over SSH.

Docker Multi-App

github.com/abhishekpr-devops/docker-multi-app

Tech: Docker, Docker Networking, Nginx, Python Flask, Bash

- Containerized a Python Flask backend and an Nginx reverse proxy using separate Dockerfiles.
- Configured `nginx.conf` to proxy incoming HTTP requests to the Flask backend over a custom Docker network.
- Automated container build, network creation, and startup with a `run.sh` Bash script.

EDUCATION

B.Tech in Computer Science and Engineering
Jawaharlal College of Engineering and Technology (JCET), Ottapalam | 2021 – 2025

COURSES & TRAINING

- CCNA 200-301 Network Fundamentals — Course, Simplilearn | Jun 2026
- Introduction to Cloud Computing — Course, Simplilearn | Jun 2026
- Currently Preparing: AWS Certified Solutions Architect – Associate (SAA-C03)
